

This is a screenshot of information sheet that participants will see before they start the experiment.

Thank you for taking part in this experiment. This experiment, conducted by researchers at the University of Bristol, will help us better understand pedestrian route choice inside buildings.

There are six route choice tasks in the experiment. the building will be displayed in the form of a network, in which the corridor shown in white. You are the person (represented by a red circle) in the building. You can move your person to the position where the mouse clicks.

In each task, you will be asked to reach a designated destination as soon as possible. There is no correct answer to the route choice, so please decide according to how you think you would choose in reality. You can click "Exit" at the bottom right of the screen to leave at any time. Please click "Start" to start the experiment.

Please contact yunhe.tong@bristol.ac.uk for details and research-ethics@bristol.ac.uk for complaints.
