

G

50.0 μm

This scanning electron micrograph (SEM) shows a highly porous, interconnected network of fibers or filaments. The structure consists of numerous small, irregular nodes connected by thin, elongated strands, creating a complex, mesh-like appearance. The overall morphology is similar to a sponge or a porous scaffold. A white scale bar is located in the bottom right corner, with the text "50.0 μm" positioned above it. A large white letter "G" is in the top left corner.
